

CompAir

The preferred authority for compressed air solutions

BORA Range

Leading the way in innovation,
performance & efficiency

*(Now lighter and quieter too!)**

**BORA from CompAir -
The Strong Silent Type**

*As tested by the University of Pretoria
Business Enterprise Department

The new BORA pneumatic underground rockdrill from CompAir is a revolutionary step forward in both design and performance. Not only is it generally the best performing on the market, but it is considered to be the lightest and quietest in its class.

*At **103dB(A)**, the BORA exceeds all regulations by utilising a completely new 'Encapsulation Muffler' (patent pending), which can also be retro-fitted to our old drilling systems at a minimum cost.*

- **LOWER dB LEVEL**
operators can be exposed for longer periods of time without health risks.
- **ENCAPSULATING MUFFLER**
retains most of the drill lubricating oil, making it easy to dispose of.
- **FEWER PORTS & PASSAGES IN CYLINDER**
simplified maintenance & shorter service times.
- **HARDENED CAST STEEL COMPONENTS**
longer life and more robust with strengthened interior components.
- **FREEZING EFFICIENCY**
no freezing or icing up under normal conditions, eliminating costly downtime through loss of production and drill damage.

With environmental and health & safety issues key in today's market, BORA makes some bold statements. Labour efficiency and time saving comes from 15% more blows and 10% more revolutions per minute, giving up to 15% better performance than the competition. Generating higher torque also means that the BORA is more versatile and capable of drilling and bolting, unlike many other rockdrills. The BORA also boasts less environmental oil contamination and greater drilling uptime due to its nonfreezing capability.

BORA from CompAir - Leading the way!

	Competition 1	Competition 2	Competition 3	Competition 4	Compair Bora
Noise dB(A)	103	105	104	108	103

Performance Min / M	5.5	6	5.2	6	4.45
Blows per minute	2000	2100	2100	2150	2450
Revolutions Revs / Min	152	153	152	155	163

103dB(A)

AS TESTED BY UNIVERSITY OF PRETORIA BUSINESS ENTERPRISE DEPARTMENT

**BORA -
great performance
- less noise!**

The preferred authority for compressed air solutions

An unsilenced rockdrill, used on surfaces to drill vertical holes. Mainly used by customers in the quarrying/ construction industries. It has a weight of **25kg** and operates at **120dB**. It strikes **2450 blows per minute**.

Enquire on our different units!

An unsilenced robust pavement breaker, used to break up concrete surfaces. Especially used in construction and road works.

A silenced flat backhead rockdrill that fits onto most rigs in the industry, used to drill vertical holes for underground roof bolting purposes.
